

Improve Business Efficiency by Automating EDI

For any company with multiple trading partners, EDI transactions and integration create operational complexity. Minimizing this complexity is critical when you need to **consolidate orders, financials across all operations for reporting**, provide visibility into the sales performance of each business partner

Companies using OptiPro powered by SAP Business One turn to DiCentral for the most comprehensive hosted EDI integration services on the market. The DiCentral solution allows you to take your EDI program beyond traditional hosting models by providing complete mapping, integration, visibility, control, and communication.

As companies grow, so do their EDI requirements. With DiCentral, OptiPro users can simplify their business processes and focus on their core competencies. Businesses that migrate their internal EDI systems to DiCentral find that they escape the constant upgrades, daily maintenance, and personnel shortages that plague other companies.

The software's functionality supports:

- Seamless integration to OptiPro
- Multiple ASN packing schemes with preconfigured UCC128 bar code labels
- Preconfigured trading partner maps with built in business processes
- Provides unmatched visibility and control of your inbound/outbound data
- Automatically calculate retailer allowances in inbound purchase orders
- Dynamic inventory update synchronizes correct shipping information with OptiPro
- Multi-user versions in 5, 10 and 15 user packs
- Add on modules for increased functionality available
- Purchase order allowance adjustment
