

Quality Assurance Management

for small and midsize manufacturers

Quality is a competitive advantage. Quality Assurance (QA) Management from OptiProERP enables small and midsize manufacturers to thrive in a competitive environment. Exceed your customer's quality expectations by setting up proactive quality control for materials, inventory, sub-contracted labor and more.

OptiProERP's Quality Assurance Management delivers end-to-end visibility and tracking at the part level, identifying quality issues before deviation from specifications can ruin an entire production run.

- Set up quality checks that automatically trigger at pre-defined points in production.
- Conduct QA on site using our Quality Control (QC) mobile application to reduce data collection time.

- Certify that inventory items on the shelf are still usable before releasing to the shop.
- Confirm accuracy of the pick and pack list and packaging requirements before releasing shipment to customer.

Quality Assurance from OptiProERP automatically integrates quality control information into production orders and routing. Information like: non-conforming inventory, on-hand inventory and contracted materials and services - all without redundant data entry.

of survey respondents consider quality a strategic and competitive differentiator.

Quality Assurance for small and midsize manufacturers

OptiProERP's Quality Assurance enables quality testing at different points in the production process, allowing manufacturers to schedule QC checks as needed at points like these: on purchase/receipt of goods, during any step of a production order, prior to shipment, or internal control checks as needed. Retain current customers and win new business with impeccable Quality Assurance from OptiProERP.

OptiProERP's Quality Assurance Functionality

Return to Vendor

OptiProERP's Quality Assurance Highlights

Quality Assurance

Define quality requirements for various items used in the business and allow tracking, recording and reporting of quality information as needed. Seamless integration of QC into production orders and routing automatically generates the order of the quality requirements and QC alerts.

Material Review Board

Track and maintain all non-conformances with electronic document and detailed audit trails. The Material Review Board tracks raw materials, work in progress and finished goods, expediting negotiated pricing or return of items to supplier.

Return to Vendor

Streamline post-inspection processes such as Return to Vendor when quantities of received goods are faulty or are rejected after inspection.

About OptiProERP

OptiProERP was founded with the vision to solve the 21st century problems that manufacturers face.

Our solution was OptiProERP, a unique manufacturing-specific solution, built on SAP Business One, the #1 ERP platform for small and midsize businesses. With SAP's continuous 21st century platform innovation, we could focus on innovating and developing our industry-specific manufacturing functionality. Instead of adding a layer of code on top of SAP Business One, OptiProERP is built into the DNA of SAP's trusted ERP platform.

The result is a 21st century solution designed to help growing manufacturers gain full visibility and control of their business, reduce production costs, increase profit margins and leverage data to inform intelligent business decisions.

“In searching for a new system, the first and foremost requirement for us (Emco Wheaton) was to get the data we needed to do our jobs quickly without the need to write custom reports. We wanted something that had robust forecasting out of the box and that was OptiProERP.”

Matt Granger, Manager of Corporate Development, Emco Wheaton Retail Corporation
